Suite 104
Germantown, WI 53022

July 23, 2008

Dear Mr. Herro:

Our firm has completed the SAE test in connection with the Centron Fuel Enhancer and its effect on emissions. Our tests have confirmed that both Nitrous Oxide and Hydrocarbon emissions are reduced significantly, as shown in the following table:

	At Idlc Under Load	
NOx	38%	66%
HC	23%	42%

In addition, there was no negative result in connection with Oxygen, Carbon Monoxide, and Carbon Dioxide. We have undertaken many tests before and we have never seen emission reductions as dramatic as these.

Regards,

Claude J. Travis
Past Chairman Joint SAE/TMC Truck and Bus In-Service Test Procedure Committee
